

Moving MaxLoad Pro

Please Note: The MaxLoad[®] Pro software is designed with an authorization scheme that enforces the MaxLoad[®] Pro licensing system. You must uninstall the license back to original MaxLoad[®] Pro license floppy diskette if:

- You are getting a new computer / hard disk
- You are upgrading the version of Windows

To uninstall and move MaxLoad[®] Pro follow the steps listed below

Step1: Uninstall license. If you purchased an **e-license** skip Step 1 and call TOPS Technical Support after Step 2 and Step 3

- Run MaxLoad Pro. You can access MaxLoad Pro from Start | Programs | TOPS for Windows Apps menu
- At the Login dialog box, login as any user. The Supervisor password is “TOPS SOFTWARE”
- Once logged in, access Adjust Authorization dialog box from the Help menu
- Insert original MaxLoad[®] Pro key floppy license diskette, in floppy drive
- Click ‘Uninstall License to Floppy’. Make sure that the Source and Destination Path are correct, and then click OK. This will move the license back on to the floppy diskette

Step2: Install the software on the new machine. Follow the directions in “Installing MaxLoad Pro” or “Network Installation Instructions” documents, respectively

Step3: Move data over to the new installation. This step is optional. Follow this only if you want to carry over the manifests, SKUs, and other data defined in MaxLoad Pro over to the new installation.

By default, MaxLoad Pro stores all its data in a folder named ‘data’ which resides under the Max2Pro directory. Ensure that the DbPath in the MaxLoad2.ini file points to the correct data folder
